Effective Presentation of Infection Control Data

Bonnie Barnard, MPH, CIC

Quality Specialist

St. Peter's Hospital

Helena, MT

bmbarnard@bresnan.net

Hosted by Paul Webber
paul@webbertraining.com
www.webbertraining.com

What are we going to do today?

- Outline the process of transforming data into information and knowledge
- List the components of a well-designed data display
- Describe factors to consider in the process of designing a meaningful report
- Discuss the issues related to the use of comparative or benchmarking information

What is surveillance?

Systematic method of collecting, consolidating, and analyzing data concerning the distribution and determinants of a given disease or event, followed by dissemination of that information to those who can change the results

Recommended Practices for Surveillance

- Assess the population
- Select the outcome or process to survey
- Apply surveillance definitions
- Collect surveillance data
- Calculate rates and analyze surveillance findings
- Apply risk stratification methods
- **Report and use surveillance information**

The Data Model

The goal of data presentation is to create wisdom by converting data into information, information into knowledge, and knowledge into wisdom.

Why Analyze, Display and Report Data?

- **Tracking and Trending**
 - Trends/changes over time
 - Seasonal occurrences
 - Outbreaks
 - Sentinel events
- **Benchmarking/Comparison**
 - Compare to others
 - Detect areas for improvement
 - Use to improve performance

Hosted by Paul Webber paul@webbertraining.com

The Toolbox

- Case Finding / Marker Tools
- Collection and Storage Tools
- Analysis Tools
- Presentation Tools

Case Finding / Marker

- Tasks
 - Finding potential nosocomial infections
- Tools
 - Manual review of multiple data sources using ICP knowledge
 - Data mining using artificial intelligence/logic (MedMined, Theradoc, Cereplex)

Data Sources

- Laboratory
- Operating Room
- Employee Health
- Respiratory Care
- Admitting
- Emergency Room

Data Mining

Most of the ICP's time is spent reviewing laboratory and patient data, generating reports, etc. Time spent on these tasks takes away from the teaching and interventions that prevent infections.

Staphylococcus aureus isolates and methicillin resistance by month by unique patient (duplicate specimens removed)

| Year | Month | I | R | S |
|------|-----------|-----|-----|---|
| 2001 | September | 37 | 66 | |
| | October | 59 | 110 | |
| | November | 57 | 102 | |
| | December | 49 | 98 | |
| 2002 | January | 43 | 74 | |
| | February | 47 | 69 | |
| | March | 53 | 56 | |
| | April | 51 | 53 | |
| | May | 73 | 75 | |
| | June | 56 | 71 | |
| | July | 77 | 76 | |
| | August | 59 | 92 | |
| | September | 59 | 77 | |
| | October | 61 | 91 | |
| | November | 66 | 95 | |
| | December | 61 | 84 | |
| 2003 | January | 67 | 84 | |
| | February | 57 | 79 | |
| | March | 74 | 67 | |
| | April | 68 | 61 | |
| | May | 82 | 77 | |
| | June | 106 | 75 | |
| | July | 91 | 87 | |
| | August | 103 | 93 | |
| | September | 96 | 74 | |
| | October | 99 | 68 | |

Effective Presentation of Infection Control Data

Bonnie Barnard, MPH, CIC

A Webber Training Teleclass

Collection and Storage

- **Tasks**
 - Data entry
 - Data warehousing
 - Data relationships
- **Tools**
 - IC surveillance software (e.g., AICE, Epi Info, EpiQuest, Softmed)
 - Database (Access, Oracle)
 - Spreadsheet (Excel)

Analysis

- **Tasks**
 - Rate calculations
 - Statistical calculations
 - Trend Analysis
- **Tools**
 - Spreadsheets (Excel / Lotus)
 - Statistical Software (SPSS, SAS)
 - IC Surveillance (AICE, Epi Info)
 - Database (Access)

Summarizing Data

- **Comparisons among categories**
 - Bar charts, pie charts, pareto charts
- **Frequency of events**
 - Rates, ratios, proportions
- **Variability analysis (numerical)**
 - Mean, median, mode
 - Range, standard deviation
- **Variability analysis (graphical)**
 - Line graphs, histograms, control charts

Presentation

- **Tasks**
 - Generating reports
 - Creating tables
 - Creating graphs and charts
- **Tools**
 - Business Graphics (Powerpoint)
 - Spreadsheet (Excel)
 - IC Surveillance Software (AICE, Epi Info)

From Data to Information

Line List – A Data Table

| First Name | MR# | Age | Admit Date | Cult Date | Cult Site | Organism | ORG. 2 | H/A | NI Site |
|------------|---------|-----|------------|-----------|-----------|----------|--------|-----|---------|

Anatomy of a Graphic Display of Data

Guide to Selecting a Graph or Chart to Display Data

| Type of Graph or Chart | When to Use |
|------------------------|--|
| Line Graph | Trends in numbers or rates over time |
| Histogram | Frequency distribution of a continuous variable Number of cases during an epidemic or over time |
| Simple Bar Chart | Compare size or frequency of different categories of a single variable |
| Grouped Bar Chart | Compare size or frequency of different categories of 2-4 series of data |
| Stacked Bar Chart | Compare totals and illustrate component parts of the total among different groups |
| Pie Chart | Show components of a whole |
| Scatter Diagram | Plot association between two variables |

** Adapted from Dicker R, et al. *Principles of Epidemiology: An Introduction to Applied Epidemiology and Biostatistics*, USDHHS, Atlanta, Georgia, 1992.

Effective Presentation of Infection Control Data

Bonnie Barnard, MPH, CIC

A Webber Training Teleclass

Bar Charts

- Visual display using one coordinate
- Display summary data, e.g., rates for categories of a variable
- Allows comparisons of magnitude between categories of data
- Can display vertically or horizontally

Bar Chart - Example

PERTUSSIS. Reported cases,* by age group — United States, 2002

*Of 9,771 cases, 25 cases were reported with unknown age.
 In 2002, 21% of reported cases were in infants aged <6 months (who were too young to receive 3 DTap-doses), and 52% of cases were in persons aged ≥10 years (no pertussis vaccine is licensed for use in persons aged ≥7 years).

Histogram

- Displays the frequency distribution for categories of a variable (individual data points grouped into classes)
- Can identify normal versus skewed distributions
- Example - epidemic curve for an outbreak

Histogram - Example

Pie Charts

- Display proportion or each category of a variable
- Identify relative size of proportions

Distribution of Nosocomial Infections, U.S., NNIS Jan 93 - Dec 00

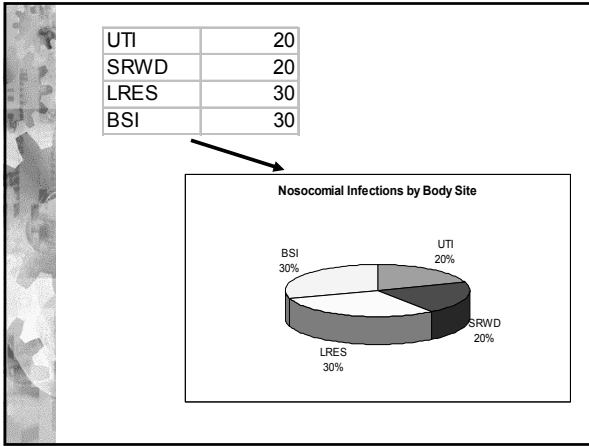

CDC, NNIS Semiannual Report, Dec 2000

Effective Presentation of Infection Control Data

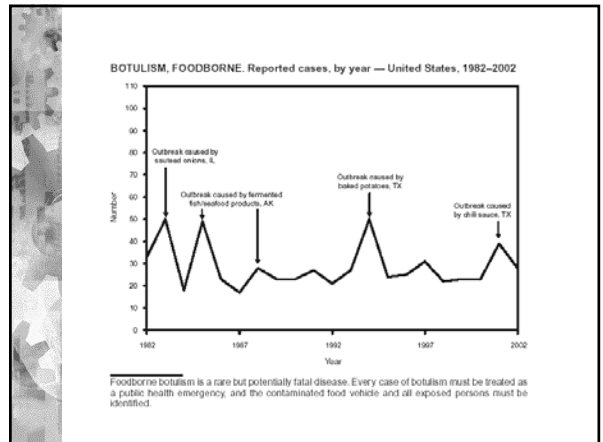

Bonnie Barnard, MPH, CIC

A Webber Training Teleclass

Line Graph Run Chart and Control Chart

- Plots the movement of something over a given period of time
- Used with any type of data
- Run Chart vs Control Chart

Patient Care Dashboard at Hospital X

From Data to Presentation

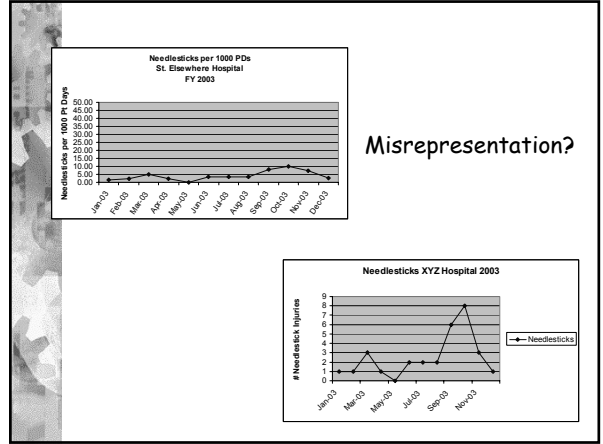

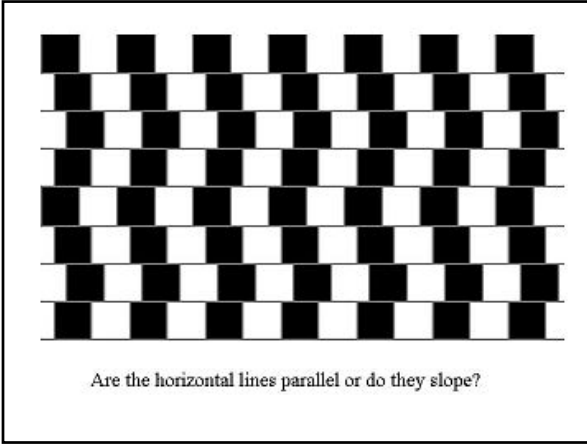

- Collect and organize your data!
- Begin with a sketch of your finished display
- Select the data to present
- Begin with a basic display, then format it

Effective Presentation of Infection Control Data

Bonnie Barnard, MPH, CIC

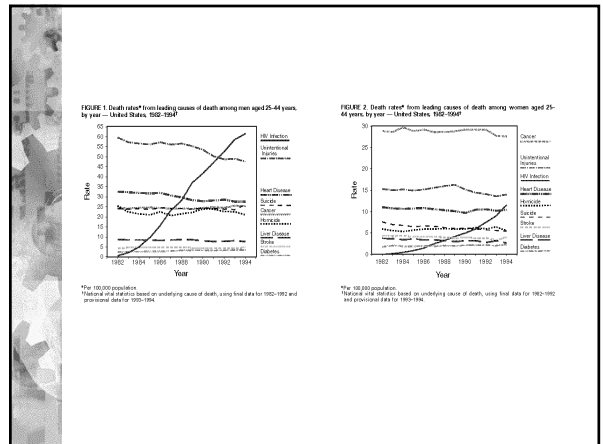

A Webber Training Teleclass

Data Graphics Principles

- Above all else, show the data
- Maximize the data-ink ratio, within reason
- Erase non-data-ink, within reason
- Erase redundant data ink, within reason
- Don't misrepresent the data
- Revise and edit

The Visual Display of Quantitative Information

Effective Presentation of Infection Control Data

Bonnie Barnard, MPH, CIC
A Webber Training Teleclass

Visuals in Presentations

- Enhance
- Aid in comprehension
- Simple - less is more
- Use color, typeface and clipart carefully
- Continually ask "How will this reinforce my message?"

Who is your audience?

- Administration
- Physicians
- Clinical Department Directors
- Clinical Staff
- Non-Clinical Department Directors
- Non-Clinical Staff
- Nursing

Data Display Summary

- Be sure of what you want audience to understand from your display!
- Attract audience attention
- If data are not compelling, don't use them
- Use appropriate display type
- One key message per visual display

Research Paper Analogy

- Background / rationale (why)
- Methods
 - Population (who)
 - Setting (where)
 - Time period (when)
 - Event reporting on (what)
 - Case finding (how)
 - Criteria for inclusion

Research Paper Analogy (cont'd)

- Findings
 - Numerator / denominator
 - Visual displays
- Discussion
- Limitations
- Recommendations
- Dissemination

Graphic Presentation Output Options

- Handouts
- Presentation books - "flip 'n tell"
- Black & white overheads
- Color overheads
- 35mm slides
- Screen shows

Effective Presentation of Infection Control Data

Bonnie Barnard, MPH, CIC
A Webber Training Teleclass

Benchmarking

Process of comparing oneself to others performing similar activities, so as to continuously improve

----- Lenz et. al.

Benchmarking Requirements

- Standard criteria to define cases
- Criteria applied consistently
- Surveillance methodology consistent
- Rates and ratios calculated the same
- Large enough denominator
- Standardized risk adjustment

Process of Using Data to Improve Care

- Decide what you want the project to accomplish
- Gather information
- Set up management processes
- Obtain and analyze data
- Decide what information to convey to audience
- Determine how to present data to audience
- Test materials with audience
- Select best way to package info for audience
- Distribute info to audience
- Create ways for audience to use info
- Evaluate progress

Source: www.talkingquality.gov

Communication Guidelines

- Most affected first
- Implications understood
- Respect for audience
- Involve the affected parties in translation from data to intervention
- Commitment to communication skills

Sandman PM. Emerging communication responsibilities of epidemiologists. *J Clin Epidemiol.* 1991;44(1 SUPPL):418-38.

Plan, plan, plan!

Effective Presentation of Infection Control Data

Bonnie Barnard, MPH, CIC

A Webber Training Teleclass

Goal of Presentation of Data

To synthesize and summarize data in a way that is easily understood by the intended audience so that they are empowered to take action
